

Figure S4

Supplementary Figure S4. TCF7L2 binds to cell type-specific enhancer regions. Binding patterns of TCF7L2, H3K27Ac, and H3K4me1 near the APOB locus are shown for HepG2 cells and HeLa cells; the number of tags reflecting the ChIP enrichments are plotted on the y-axis. The genomic coordinates shown are: chr2: 21,220,000-21,340,000 (hg19).
