

**Table 1: Category of vapour pressure in pesticides and estimated effects
on air concentrations as applied by the EFSA**

Category	Vapour pressure (mm Hg at 25°C)	Estimated air concentration
Low volatility	less than 5×10^{-3}	$1\mu\text{g}/\text{m}^3$
Medium volatility	5×10^{-3} up to 10^{-2}	$15\mu\text{g}/\text{m}^3$
High volatility	more than 10^{-2}	Separate estimate when considered necessary
