

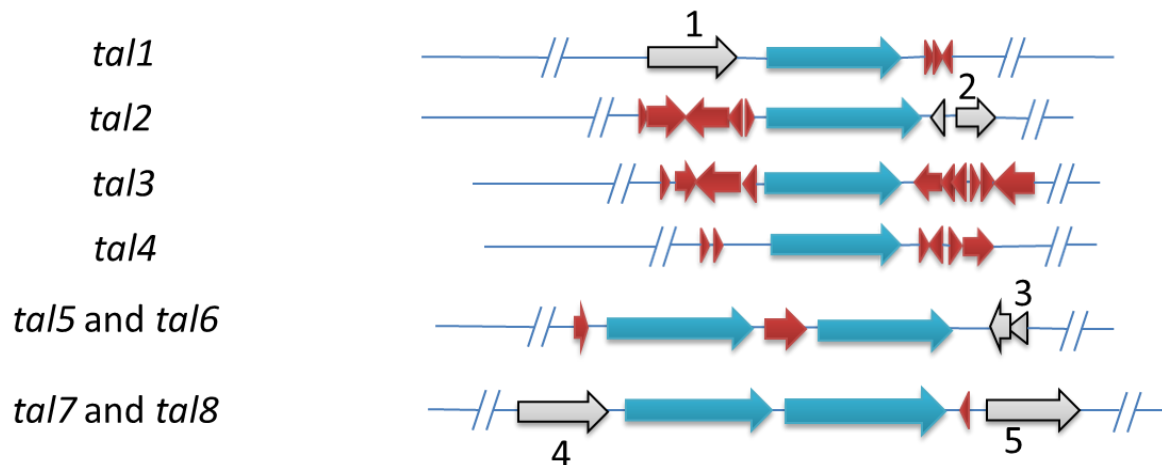

Figure S9. Most TAL effector genes are flanked by transposon elements. The blue arrows indicate the TAL effector genes and the dark red arrows show the transposase genes; the gray arrows indicate other genes. The genes are listed as following: 1, *RpoD*, encoding RNA polymerase subunit sigma-70; 2, Hypothetical genes; 3, Acetyltransferase and hypothetical genes; 4, Type III effector gene *xopL*; 5, *vgrG*, encoding type IV secretion protein.
