

Additional File 6: Fig. S1. Comparison of qRT-PCR and RNA-seq results. The changes in selected mRNA levels in visual cortices of the hooded seal and the ferret were estimated by qRT-PCR (black; n = 4) and RNA-seq (white). The mRNA levels of the genes *S100B*, *Clu*, *SLC1A6* and *GAPDH* were evaluated. Both methods gave similar results.
