

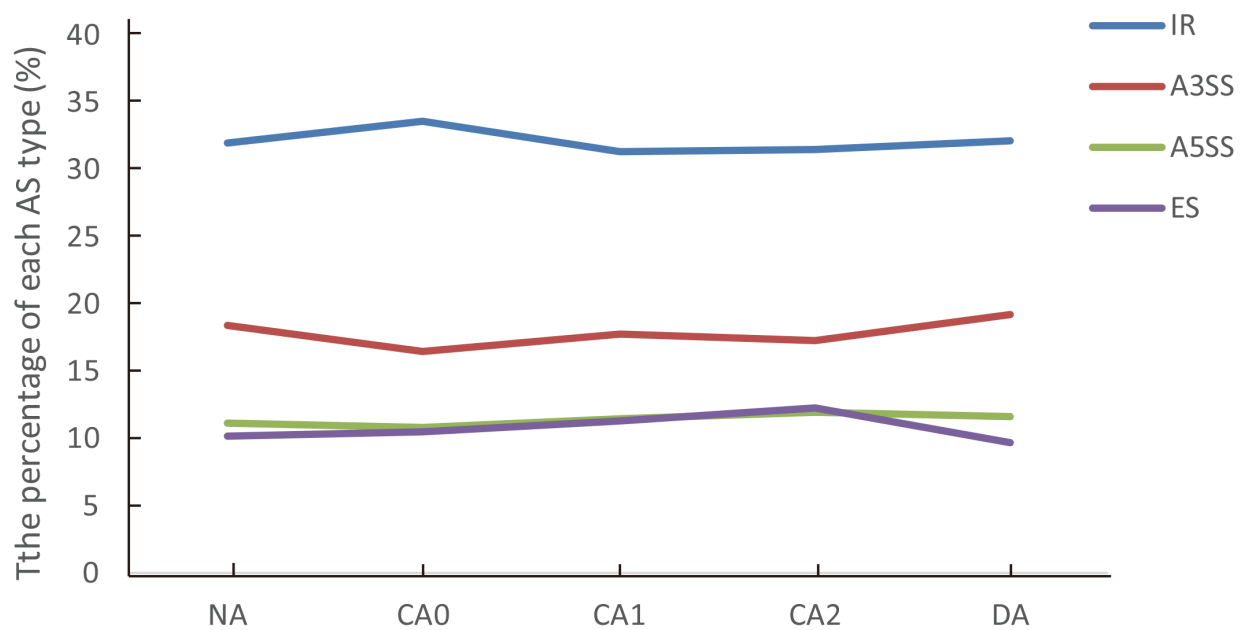

Figure S1. The percentage of the four main AS types during cold acclimation. IR: intron retention; ES: exon skipping; A3SS: alternative 3' splice site; A5SS alternative 5' splice site. NA: non-acclimation; CA0: cold stress of 6 hours at 10°C, day/night; CA1: cold acclimation of 7 days at 10/4°C, day/night; CA2: cold acclimation of 7 days at 4/0°C, day/night; DA: de-acclimation of 7 days at 25/20°C, day/night.
