

Additional file 6: Figure S3. Induced defence: Gene ontology (GO) term enrichment analysis

GO terms overrepresented in differentially over- or under-expressed transcripts for each genotype in symptomatic needles (S) compared to non-symptomatic needles (NS), once symptoms of infection by *C. rhododendri* were visible: (a) PRA-A, (b) PRA-B, (c) PRA-D, (d) PRA-R. Terms were ranked by the corrected p-value.
