

Additional File 4: Supplemental Figure 4. Human transcription factor motif enrichment for known and potential EBNA2 cofactors. Enrichment occurrence of exemplary hTF motifs (Figure 3, black diamonds) in EBNA2 shared and type-specific peak sets. For the four exemplary motifs, the enrichment (%foreground divided by %background) of predicted binding sites for the motif is shown. Asterisks indicate significant motif enrichment ($P < 0.05$), as calculated by HOMER.
