

Supplemental Figure 12: Rhabditina Mitogenome Characteristics and Substitution Rates by Reproduction

SI Figure 12: Rhabditina Mitogenome Characteristics by Reproduction

Box and whisker plots for total genome and PCG characteristics for A) size, B) %GC content, C) GC compositional skew, and D) substitution rates for PCG sequences for the Rhabditina suborder. Medians and quantiles were calculated for each characteristic based on the life traits classification for Reproduction strategy. Rhabditina reproductive strategies were significant for genome size, PCG proportion of the genome, genome GC skews, and PCG GC skews.
