

Supplementary Figure S5: The strongest signatures of selection according to $|XP - EHH|_w$ between the Ixworth chicken population and (a) commercial broiler line A, (b) commercial broiler line B, (c) commercial brown layers, (d) commercial white layers, and (e) red junglefowl. Strong selective sweeps are indicated by the red lines according to the top 0.1%: (a) $|XP - EHH|_w > 3.32$, (b) $|XP - EHH|_w > 3.46$, (c) $|XP - EHH|_w > 3.10$, (d) $|XP - EHH|_w > 2.92$, and (e) $|XP - EHH|_w > 3.71$, respectively.
