

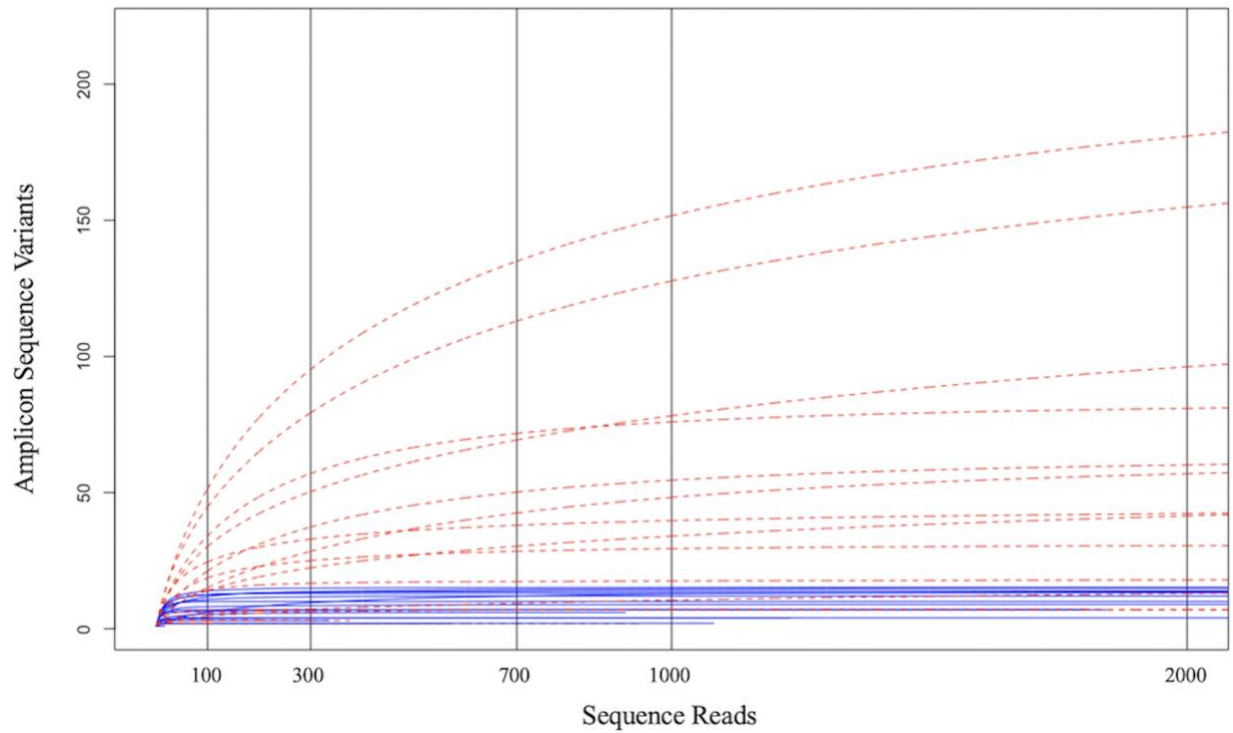

Figure S1. Rarefaction curve of cystocentesis and voided urine samples from 19 dogs

A rarefaction curve shows amplicon sequence variant richness at each designated sequence read threshold (100, 300, 700, 1000, and 2000). Each threshold is indicated by a vertical black line. Red, dashed lines represent midstream voided urine samples. Blue, solid lines indicate cystocentesis urine samples. All 19 original participants are included.
