

Additional file 9

Additional file 9. Expression of flowering genes in *lhy-7* mutant under SDs of 20-h total duration. Plants were grown for ten days under short-day cycles of 20-h total duration (6.7-h light and 13.3-h dark). Whole plant materials were harvested for total RNA extraction. Transcript levels were examined by qRT-PCR. Biological triplicates were averaged and statistically treated using Student *t*-test (* $P < 0.01$). Bars indicate standard error of the mean.
