

A: GO classification results of differentially expressed Transcripts (DETs) found in XH09-7 vs ZhN03-7

B: GO classification results of differentially expressed Transcripts (DETs) found in XH09-21 vs ZhN03-21

C: GO classification results of differentially expressed Transcripts (DETs) found in XH09-28 vs ZhN03-28

Figure S1. GO classification results of differentially expressed Transcripts (DETs) found in three DETs sets. The genes were assigned to three main categories: cellular component, molecular function and biological process. The right-hand y-axis indicates the number of annotated genes. The left-hand y-axis indicates the percentage of annotated genes.
