

Fig. S2

Additional file 2: Fig. S2. **Root morphological responses to drought.** Changes of total root length (A), total average diameter (B), total surface area (C), and total project area (D) of cotton roots during drought stress. Each data point represents the mean of five independent biological replicates (mean $\pm$ SD). *Represents a statistically significant difference when compared with the control (* P <0.05; ** P <0.01).
