

Supplementary Figure 12

Fig. S12 Induction of *BdWOX* and *BdLBD* genes by soil touch. Following the mechanical stimulation by soil touch, the first leaf nodes and their internodes were harvested for total RNA extraction, and transcript levels were examined by reverse transcription-mediated quantitative PCR (RT-qPCR), as described in Fig. 6b. Biological triplicates, each consisting of eight independent plants, were statistically analyzed (t -test, $*P < 0.01$). Error bars indicate SE.
