

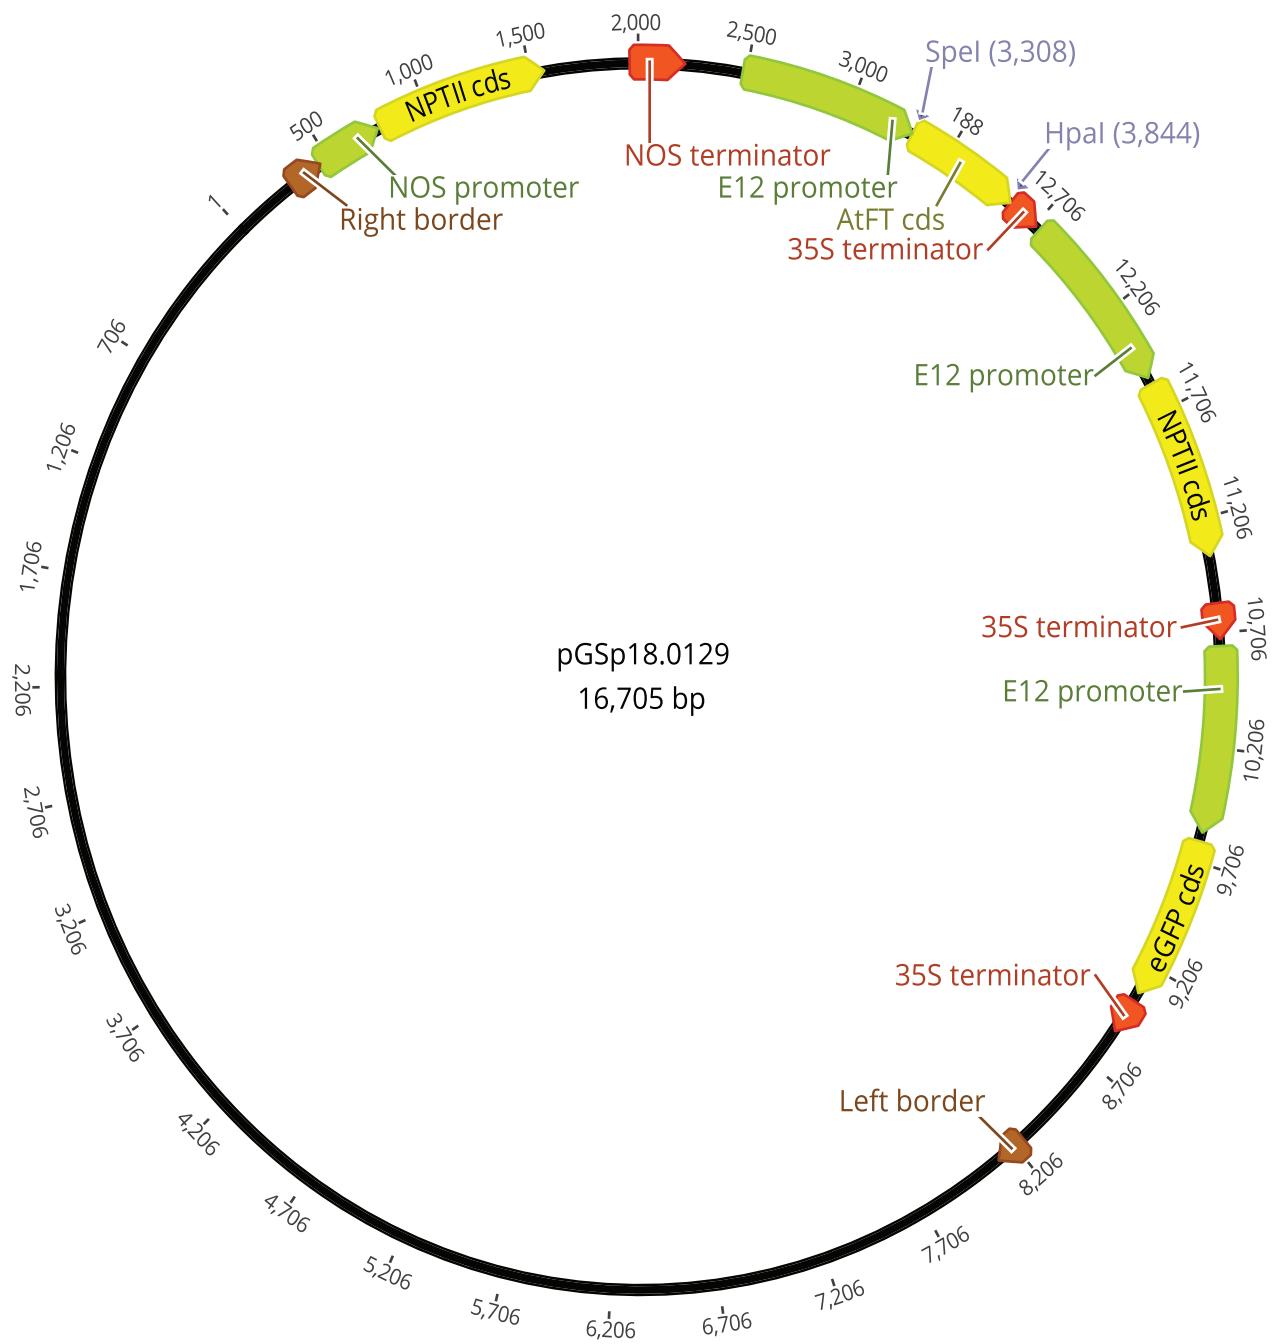

Figure S2: pGSp18.0129 vector map. Illustration of *AtFT* overexpression vector used to transform *T. cacao* PSU-Sca6 explants and *Arabidopsis ft-10* mutant in reported studies. The coding sequence of *AtFT* from *Arabidopsis* Columbia CS70,000 was cloned into entry vector pMiniT2.0 then subcloned into the *SpeI* and *HpaI* sites of pGZ12.0501 (Genbank KF871320.1). *AtFT* expression in the binary construct is driven by the constitutive E12 promoter.
