

Figure S7

Figure S7. Diaminobezidin (DAB) staining of *MeGRXC3*-OE and wild type *Arabidopsis* seedlings. Seedlings (21 day after sowing) grown on 1/2 MS were infiltrated with 2 mL of DAB solution (1mg /mL DAB, pH 3.8) in Eppendorf tube for 12 hours. Then the seedlings were immersed in 95% (w/v) boiling ethanol for 10 min to decolorize the chloroplast.
