

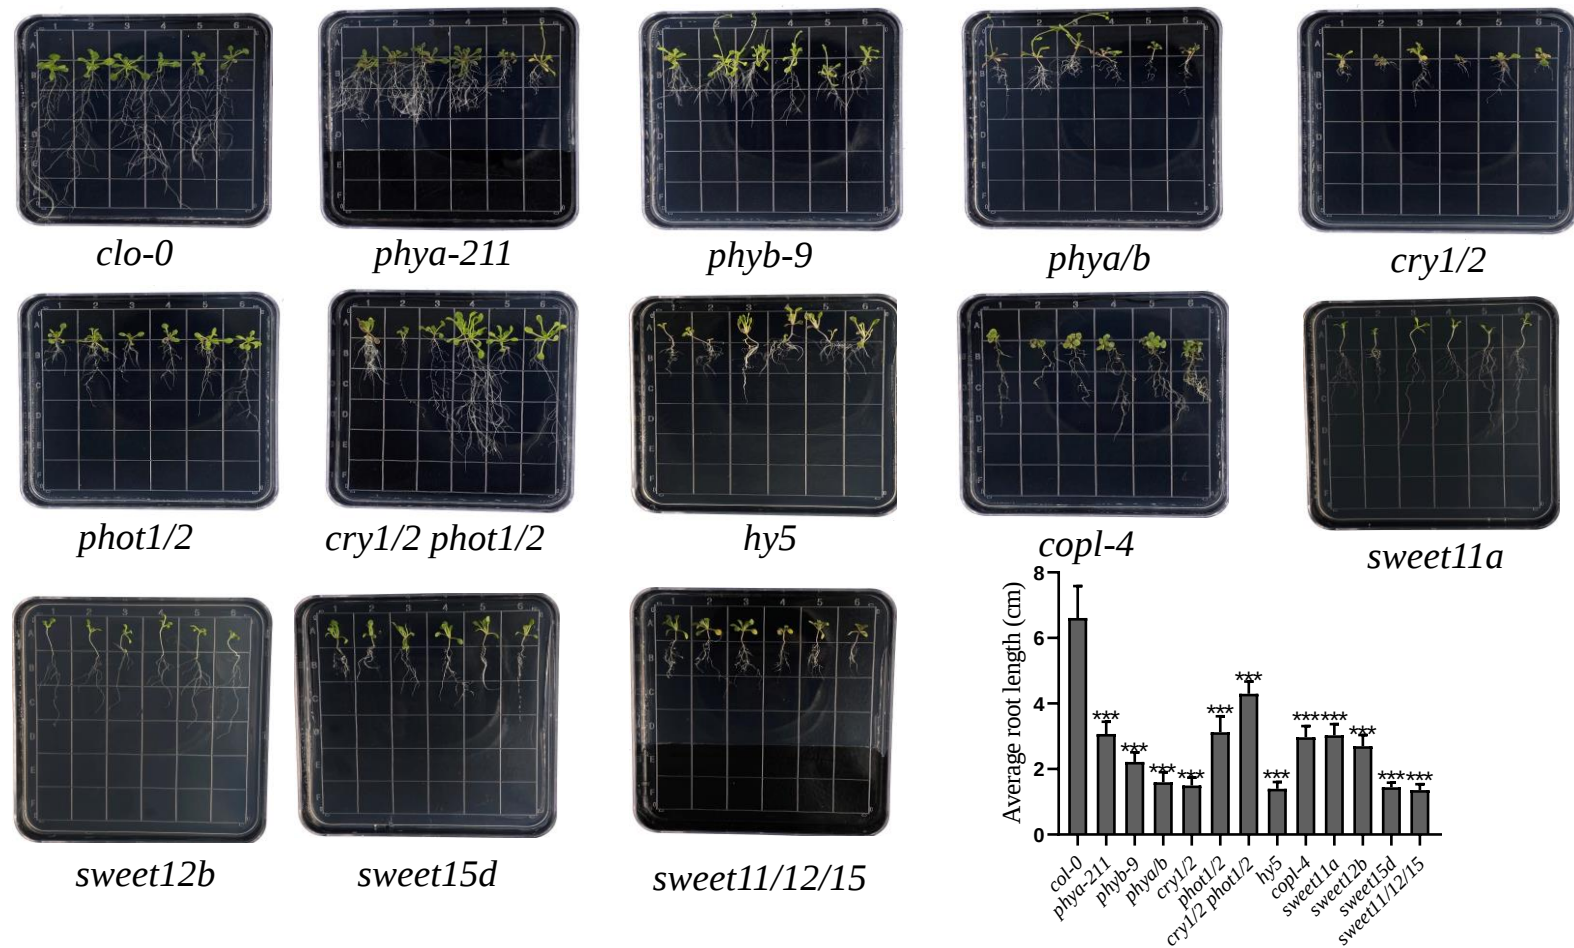

Figure S1: The photoreceptor mutants were grown on 1/2MS medium for 10 days. Root length of these mutants was compared in (b). Values are mean $\pm$ SD of more than 15 plants of each genotype. Asterisks indicate significant change of root length in various mutants as compared to that in Col-0. (* $P < 0.05$; ** $P < 0.01$; *** $P < 0.001$, two-tailed t-test).
