

Supplementary Table S1. Baseline hematological abnormalities (pre-existing adverse events) among RR-TB patients (n=412)

Hematological abnormality	Number with available baseline data	Number with abnormality	Prevalence (among those with data)
Anemia (Hb <12/13 g/dL)	243	134	55.1%
Thrombocytopenia (platelets <150×10 ³ /μL)	226	44	19.5%
Leukopenia (WBC <3.7×10 ⁹ /L)	230	31	13.5%
Any abnormality (composite)	412 (full cohort)	164	39.8%

Note: Denominators vary because baseline complete blood count components were not available for all patients. The composite “any abnormality” uses available data for each component (i.e., a patient was counted if any available baseline measurement met the criterion).
