

Supplementary Table 1: Comparison of baseline characteristics between patients excluded due to lacking admission high-sensitivity cardiac troponin T (hs-cTnT) or loss to follow-up and the enrolled patients

Baseline characteristics	Total cohort (N= 256)	Exclusion (N=64)	p value
Age (years) mean	61.7 ± 12.7	62.4 ± 10.4	0,102
Sex (Male) n (%)	193 (75.4)	45(70.3)	0.126
Glasgow Coma Scale (GCS) Median (IQR)	10.0 (6.0 – 14.0)	10 (6.0-14.0)	
Baseline modified Rankin Scale (pre-mRS), median [IQR]	0 (0–4)	0 (0–4)	0.324
Referred from other hospital n (%)	145 (56.6)	38(59.3)	0.481
Hematoma volume (ml)	22.0 (8.4 – 52.1)	21.2 (7.8- 53.3)	0.318
Time to hospital admission (hour)	5.0 (3.0 – 7.8)	5.0(4.0-8.0)	0.214

As shown in Supplementary Table 1, there were no statistically significant differences between the excluded and enrolled patients; therefore, exclusion is unlikely to have materially affected the mortality outcomes of the study population.
