

Additional File 9 - Full-length blots of BiP/GRP78 and GAPDH detection shown in Figure 6 A.

Left (21 % O₂) and right (3 % O₂) panels: After the protein transfer, the nitrocellulose membrane was cut in two pieces, below the 50 kDa marker, and each strip was incubated with antibodies against GAPDH or BiP/GRP78. Exposure times were: GAPDH 1 min (left and right); BiP/GRP78 1 min (left and right).
