

Fig S1. The distribution of *Fn* in HPSCC patients and FaDu cells. (A) FISH showed that *Fn* exists in carcinoma tissue. (B) FISH showed that *all-bacterium* exists in carcinoma tissue. (C) Merged. (D) The surface of FaDu cell in SEM. (E) Microvillus structure could be discovered in normal FaDu surface. (F) *Fn* could intertwine with these microvillus structures.
