

Supplementary Figure S2. Association of CCR8⁺ Tregs with CD8⁺ T cell parameters in each case. Five Hot Spots and five Cold Spots were selected per case for 81 lung squamous cell carcinoma (LSCC) patients and the CCR8/Foxp3 and GzmB/CD8 stained images of the matched fields were analyzed. The left panels show the scatter plots of patients with high CCR8⁺ Treg infiltration in the Hot Spots and the right panels show the scatter plots of patients with low CCR8⁺ Treg infiltration in the Hot Spots.
