

Supplementary Figure S3. Association of CCR8⁺ Tregs with CD8⁺ T cell parameters in Hot and Cold Spots. Both the Hot Spots and Cold Spots (five fields per case) were analyzed for the top 41 lung squamous cell carcinoma (LSCC) patients with high CCR8⁺ Treg infiltration in Hot Spots. **A.** The correlation plots with the linear regression model of the data from 410 fields are displayed. **B.** Each CD8⁺ T cell parameter in the Hot Spots and Cold Spots is shown in boxplots and compared by the Mann-Whitney U test.
