

Supplementary Figure legends

Supplementary Fig. 1 DEGs between the EC and normal groups. (a) The volcano plot of DEGs. (b) The heatmap of DEGs.

Supplementary Fig. 2 Nomogram constructed on the basis of prognostic genes. (a) The nomogram constructed on the basis of 6 biomarkers. (b) The results of the calibration curve of the nomogram. (c) The AUC values of the ROC curve of the nomogram.

Supplementary Fig. 3 Correlation analysis of 6 prognostic genes and risk scores.

Supplementary Fig. 4 The heatmap of risk scores versus clinical characteristics in six signature genes.

Supplementary Fig. 5 Correlation analysis between the six prognostic genes and clinical indicators. (a) Correlation analysis between the six prognostic genes and age group. (b) Correlation analysis between the six prognostic genes and OS group. (c) Correlation analysis between the six prognostic genes and Pharmaceutical Therapy group. (d) Correlation analysis between the six prognostic genes and prior malignancy group. (e) Correlation analysis between the six prognostic genes and prior treatment group. (f) Correlation analysis between the six prognostic genes and Radiation Therapy group.
