

Original chemiluminescence image of the LRH1 (top) and FLAG (bottom) membranes

Original bright field image of the LRH1 (top) and FLAG (bottom) membranes

Uncropped images for the Western blot presented in Figure 4B. We captured two blots together using ImageQuant™ LAS4000. To acquire them with high resolution, the most upper and lower sides of LRH1 and FLAG1 blots, respectively (approximately 5 mm for each), were not captured for this analysis.
