| <b>Title and abstract</b> | 1       | (a) Indicate the study's design with a commonly used term in the title or the abstract, Title, p.1<br>(b) Provide in the abstract an informative and balanced summary of what was done and what was found, Abstract, p.2-3                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| <b>Introduction</b>       |         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Background/rationale      | 2       | Explain the scientific background and rationale for the investigation being reported, Background, p.4-5                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Objectives                | 3       | State specific objectives, including any prespecified hypotheses, Background, p.5: paragraph 2                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Methods</b>            |         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Study design              | 4       | Present key elements of study design early in the paper, Methods, Study design, p.6: first paragraph                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Setting                   | 5       | Describe the setting, locations, and relevant dates, including periods of recruitment, exposure, follow-up, and data collection, Methods, p.6                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Participants              | 6       | (a) <i>Cohort study</i> —Give the eligibility criteria, and the sources and methods of selection of participants. Describe methods of follow-up, N/A<br><i>Case-control study</i> —Give the eligibility criteria, and the sources and methods of case ascertainment and control selection. Give the rationale for the choice of cases and controls, N/A<br><i>Cross-sectional study</i> —Give the eligibility criteria, and the sources and methods of selection of participants, Methods, Participants, p.6: last paragraph<br>(b) <i>Cohort study</i> —For matched studies, give matching criteria and number of exposed and unexposed, N/A<br><i>Case-control study</i> —For matched studies, give matching criteria and the number of controls per case, N/A |
| Variables                 | 7       | Clearly define all outcomes, exposures, predictors, potential confounders, and effect modifiers. Give diagnostic criteria, if applicable, Methods, Outcomes, p.8, p.9: first and second paragraph                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Data sources/measurement  | 8*      | For each variable of interest, give sources of data and details of methods of assessment (measurement). Describe comparability of assessment methods if there is more than one group, Methods, Outcomes, p.8, p.9: first and second paragraph                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Bias                      | 9       | Describe any efforts to address potential sources of bias, Methods, p. 6-7, p. 10 second paragraph, Discussion, p.18                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Study size                | 10      | Explain how the study size was arrived at, Methods, Statistical analyses, p. 9: third paragraph                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| Quantitative variables    | 11      | Explain how quantitative variables were handled in the analyses. If applicable, describe which groupings were chosen and why, Methods, Outcomes, p.8, p.9: first and second paragraph                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Statistical methods       | 12      | (a) Describe all statistical methods, including those used to control for confounding, Methods, Participants, p.6, Statistical analyses, p. 9-10<br>(b) Describe any methods used to examine subgroups and interactions, Methods, Statistical analyses, p. 9-10<br>(c) Explain how missing data were addressed, Methods, Outcomes, p.8: second                                                                                                                                                                                                                                                                                                                                                                                                                   |

paragraph, p.9: second paragraph

---

(d) *Cohort study*—If applicable, explain how loss to follow-up was addressed, N/A

*Case-control study*—If applicable, explain how matching of cases and controls was addressed, N/A

*Cross-sectional study*—If applicable, describe analytical methods taking account of sampling strategy, Methods, Participants, p. 6: paragraphs 2 and 3, Statistical analyses, p. 9: last paragraphs, p.10: first paragraph

---

(e) Describe any sensitivity analyses, N/A

|                          |     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|--------------------------|-----|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Results</b>           |     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Participants             | 13* | (a) Report numbers of individuals at each stage of study—eg numbers potentially eligible, examined for eligibility, confirmed eligible, included in the study, completing follow-up, and analysed, Results, p.10: last paragraph<br>(b) Give reasons for non-participation at each stage, Results, p.10: last paragraph, p. 12: Table 2.<br>(c) Consider use of a flow diagram                                                                                                  |
| Descriptive data         | 14* | (a) Give characteristics of study participants (eg demographic, clinical, social) and information on exposures and potential confounders, Results, p. 10: last paragraph, p.12: Table 1<br>(b) Indicate number of participants with missing data for each variable of interest, Results, p. 10: last paragraph, Additional file 1<br>(c) <i>Cohort study</i> —Summarise follow-up time (eg, average and total amount), N/A                                                      |
| Outcome data             | 15* | <i>Cohort study</i> —Report numbers of outcome events or summary measures over time, N/A<br><i>Case-control study</i> —Report numbers in each exposure category, or summary measures of exposure, N/A<br><i>Cross-sectional study</i> —Report numbers of outcome events or summary measures, Results, p. 12: last paragraph, p. 13-14, p.15: first paragraph                                                                                                                    |
| Main results             | 16  | (a) Give unadjusted estimates and, if applicable, confounder-adjusted estimates and their precision (eg, 95% confidence interval). Make clear which confounders were adjusted for and why they were included, Results, p. 14: last paragraph, p. 15: first paragraph<br>(b) Report category boundaries when continuous variables were categorized, N/A<br>(c) If relevant, consider translating estimates of relative risk into absolute risk for a meaningful time period, N/A |
| Other analyses           | 17  | Report other analyses done—eg analyses of subgroups and interactions, and sensitivity analyses, N/A                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Discussion</b>        |     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Key results              | 18  | Summarise key results with reference to study objectives, Discussion p.15: second paragraph                                                                                                                                                                                                                                                                                                                                                                                     |
| Limitations              | 19  | Discuss limitations of the study, taking into account sources of potential bias or imprecision. Discuss both direction and magnitude of any potential bias, Discussion p. 18, p.19: first paragraph                                                                                                                                                                                                                                                                             |
| Interpretation           | 20  | Give a cautious overall interpretation of results considering objectives, limitations, multiplicity of analyses, results from similar studies, and other relevant evidence, Discussion, p. 20: first paragraph                                                                                                                                                                                                                                                                  |
| Generalisability         | 21  | Discuss the generalisability (external validity) of the study results, Discussion, p. 17, last paragraph, p. 19, second paragraph                                                                                                                                                                                                                                                                                                                                               |
| <b>Other information</b> |     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Funding                  | 22  | Give the source of funding and the role of the funders for the present study and, if applicable, for the original study on which the present article is based, Declarations, Funding p. 21                                                                                                                                                                                                                                                                                      |

\*Give information separately for cases and controls in case-control studies and, if applicable, for exposed and unexposed groups in cohort and cross-sectional studies.

**Note:** An Explanation and Elaboration article discusses each checklist item and gives methodological background and published examples of transparent reporting. The STROBE checklist is best used in conjunction with this article (freely available on the Web sites of PLoS Medicine at <http://www.plosmedicine.org/>, Annals of Internal Medicine at

<http://www.annals.org/>, and Epidemiology at <http://www.epidem.com/>). Information on the STROBE Initiative is available at [www.strobe-statement.org](http://www.strobe-statement.org).
