

1a: Sitting time (%) among physically active jobs

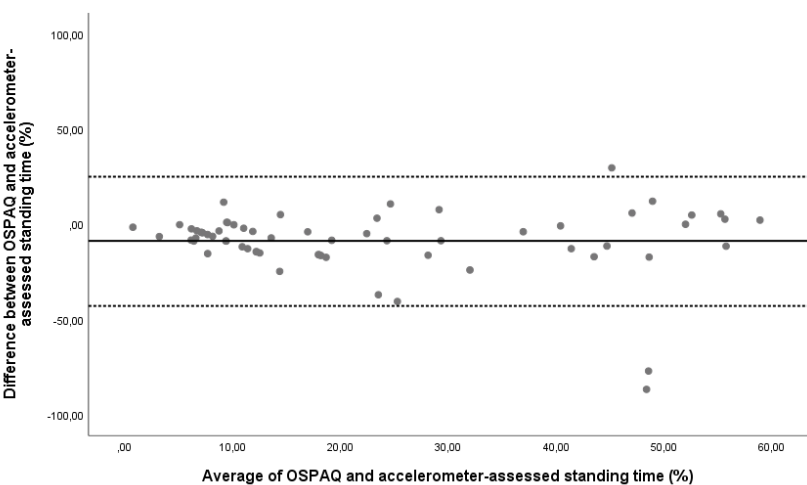

1b: Sitting time (%) among sedentary jobs

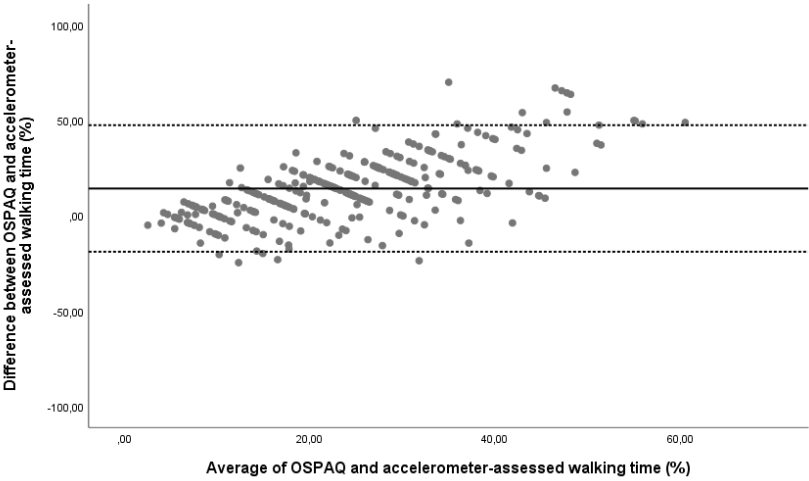

2a: Standing time (%) among physically active jobs

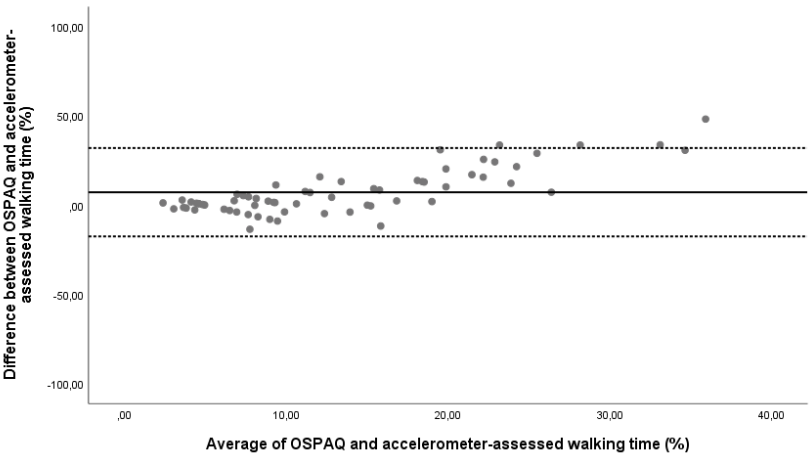

2b: Standing time (%) among sedentary jobs

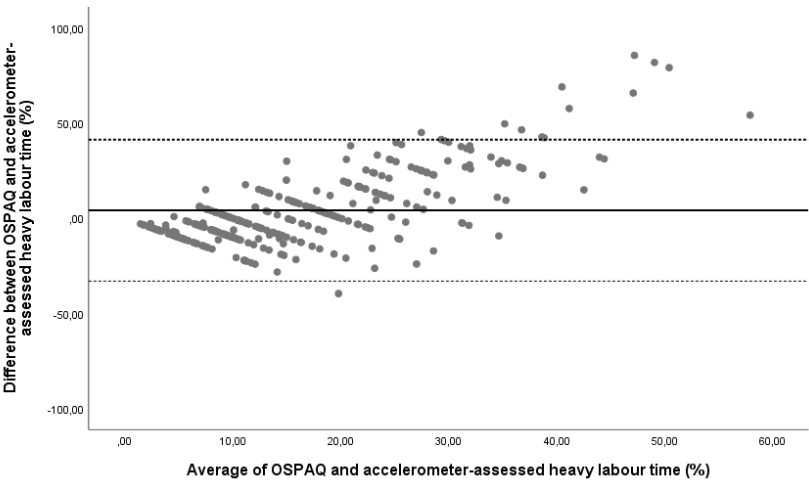

3a: Walking time (%) among physically active jobs

3b: Walking time (%) among sedentary jobs

4a: Heavy labour time (%) among physically active jobs

4b: Heavy labour time (%) among sedentary jobs

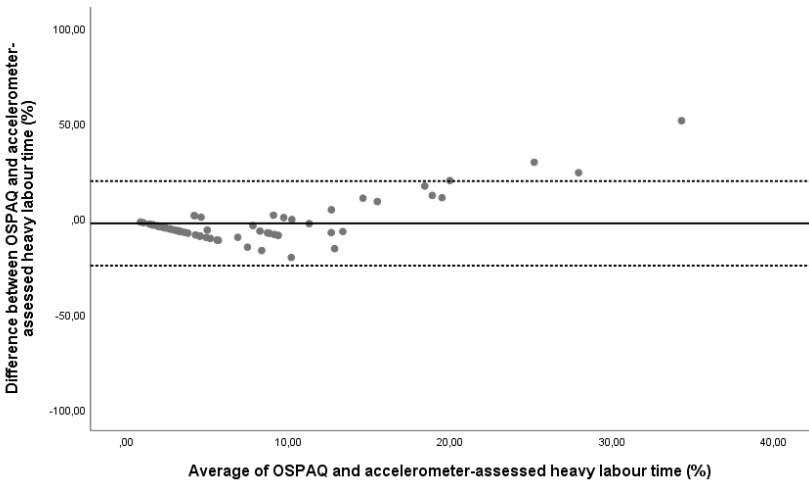

Figure S4: Bland-Altman plots of the OSPAQ compared to accelerometer-assessed (Axivity AX3) measures for sitting (1a & b), standing (2a & b), walking (3a & b), and heavy labour (4a & b) separately for physically active (a) and sedentary jobs (b). The solid line represents the mean difference between the two measures and the dotted line the representation of the limits of agreement, from -1.96sd to +1.96sd.
