¹ *n* refers to the number of participants who answered the related question. A total of 265 participants in the intervention group filled in the feedback section in the follow-up questionnaire. Nine participants answered the follow-up questionnaire but none of the feedback questions so are therefore not included in this table.

² In the digital questionnaire, the usage questions were only asked to those parents who reported receiving that take-home material in an initial question (with numbers from that question reported as "Received it").

CHC, Child healthcare.
