

The burden of disease attributable to high body mass index across Arab countries: an analysis of data from the Global Burden of Disease Study 2021

Supplementary material

This supplementary file includes graphs displaying the age-standardised DALY and YLL rates per 100 000 population for CVD and diabetes and kidney diseases, split by sex.

Figure S1: Age-standardised DALY rate per 100 000 population, for CVD, males and females

Figure S2: Age-standardised DALY rate per 100 000 population, for diabetes and kidney diseases, males and females

Figure S3: Age-standardised YLL rate per 100 000 population, for CVD, males and females

Figure S4: Age-standardised YLL rate per 100 000 population, for diabetes and kidney diseases, males and females
