

Table 1a*Sensitivity analysis of the survey period for depression symptoms*

	2 months		3 months		4 months	
	χ^2	p	χ^2	p	χ^2	p
Generation	713.99	< .001	808.06	< .001	864.46	< .001
Survey period	127.99	< .001	103.75	< .001	102.67	< .001
Gender	70.12	< .001	71.13	< .001	70.76	< .001
Employment	176.87	< .001	176.83	< .001	176.52	< .001
Generation *	114.85	< .001	89.93	< .001	86.82	< .001
Survey period						

Table 1b*Sensitivity analysis of the survey period for anxiety symptoms*

	2 months		3 months		4 months	
	χ^2	p	χ^2	p	χ^2	p
Generation	636.34	< .001	745.30	< .001	808.76	< .001
Survey period	59.11	< .001	40.66	< .001	40.03	< .001
Gender	327.65	< .001	327.69	< .001	329.88	< .001
Employment	131.37	< .001	130.46	< .001	131.36	< .001
Generation *	125.57	< .001	86.57	< .001	94.87	< .001
Survey period						

Table 2*Baseline predictors of dropout*

	OR	95% CI	<i>p</i>
Depression symptoms	0.86	[0.68, 1.09]	.199
Anxiety symptoms	0.98	[0.76, 1.26]	.847
Gender (female)	0.55	[0.34, 0.88]	.015
Employment	0.60	[0.35, 1.02]	.061

Notes. Logistic regression predicting participation in later survey waves. Odds ratios >1 indicate higher likelihood of continued participation.

Table 3*Robustness analysis for inclusion of age as continuous predictor*

	Depression symptoms		Anxiety symptoms	
	χ^2	<i>p</i>	χ^2	<i>p</i>
Generation	17.67	< .001	10.07	< .001
Age (centered)	135.49	< .001	179.65	< .001
Age ²	19.02	< .001	13.48	< .001
Survey period	107.84	< .001	44.27	< .001
Gender	63.47	< .001	308.37	< .001
Employment	231.29	< .001	187.63	< .001
Generation *	74.55	< .001	75.32	< .001
Survey period				

Notes. Linear mixed-effects models including generation and age (centered, with quadratic term) as predictors to test robustness of generational differences in depression and anxiety symptoms.

Table 4a*Robustness analyses for participants with repeated observations for depression symptoms*

	3+ waves		5+ waves	
	χ^2	p	χ^2	p
Generation	390.83	< .001	283.68	< .001
Survey period	49.42	< .001	41.24	< .001
Gender	37.25	< .001	43.47	< .001
Employment	43.26	< .001	28.43	< .001
Generation *	49.99	< .001	45.35	< .001
Survey period				

Notes. Linear mixed-effects models fit separately for participants with ≥ 3 waves and ≥ 5 waves.

Table 4b*Robustness analyses for participants with repeated observations for anxiety symptoms*

	3+ waves		5+ waves	
	χ^2	p	χ^2	p
Generation	416.28	< .001	301.42	< .001
Survey period	14.10	< .001	16.75	< .001
Gender	126.28	< .001	112.32	< .001
Employment	33.92	< .001	29.37	< .001
Generation *	57.18	< .001	58.77	< .001
Survey period				

Notes. Linear mixed-effects models fit separately for participants with ≥ 3 waves and ≥ 5 waves.
