

Supplementary Material

Figure S1. Western blot images of Fig. 2C. The WB legends of the rats' lung tissue. The blots were cut prior to hybridisation with antibodies during blotting. The images show all blots and replicates of ACSL4, GPX4, and β-actin. The inner black rectangle are the representative blots.

Figure S2. Western blot images of Fig. 3G. The WB legends of BEAS-2B. The blots were cut prior to hybridisation with antibodies during blotting. The images show all blots and replicates of ACSL4, GPX4, and β-actin. The inner black rectangle are the representative blots.

Figure S3. Western blot images of Fig. 4E. The WB legends of BEAS-2B. The blots were cut prior to hybridisation with antibodies during blotting. The images show all blots and replicates of ACSL4, GPX4, and β-actin. The inner black rectangle are the representative blots.

Figure S4. Western blot images of Fig. 5E. The WB legends of the rats' lung tissue. The blots were cut prior to hybridisation with antibodies during blotting. The images show all blots and replicates of ACSL4, GPX4, and β-actin. The inner black rectangle are the representative blots.
