

Anterior arch form-specific analysis of alveolar bone thickness and tooth inclination: Associations and clinical relevance in skeletal Class II malocclusion

Supplementary Information

Additional file 1

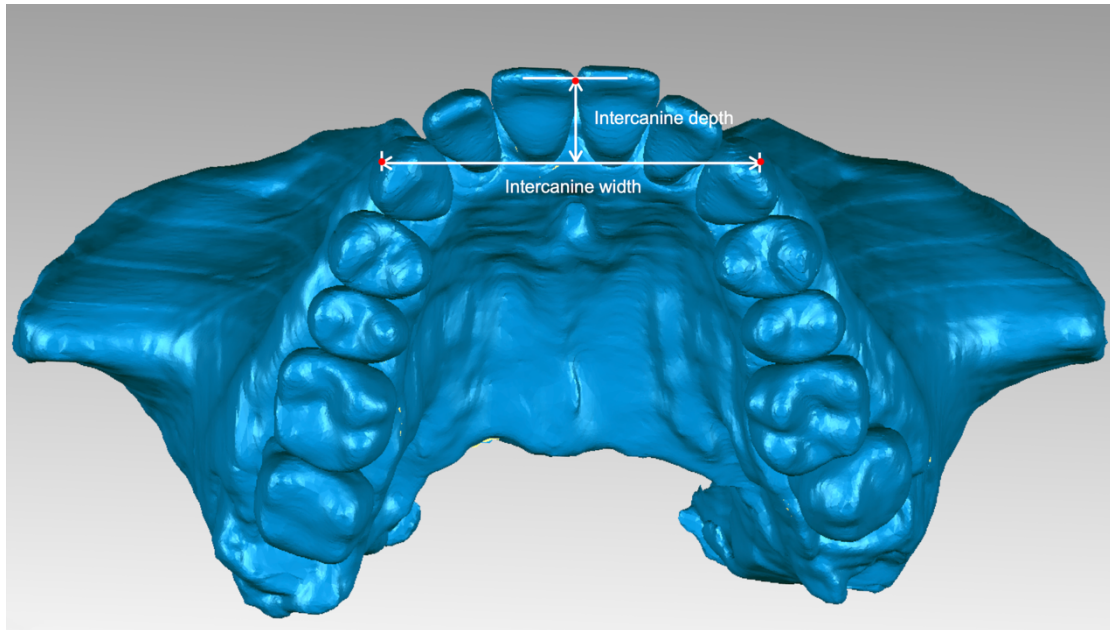

Fig. S1. Anterior arch form dimension parameters. Intercanine width: the linear distance between facial axis (FA) points of bilateral maxillary canines; Intercanine depth: the vertical projection distance from the most labial point of the proximal contact between the two central incisors to the line connecting the FA points of bilateral maxillary canines.
