

Supplementary figure 1. Age at first birth without stratifying by education level

Supplementary figure 2. Age at first newborn by birth cohort obtained via regression spline

Supplementary figure 3. Percentage of women with each education level, according to birth cohorts

Supplementary table 1. Association between socioeconomic scores and quantitative variables. Marginal averages with 95% confidence intervals.

Reproductive variable	Socioeconomic variable	Category	Overall Mean (95% CI)	p	Women born <u>before</u> 1950 Mean (95% CI)	p	Women born <u>after</u> 1950 Mean (95% CI)	p
Age at menarche	Parent's SE level	Low	13.30 (12.63, 13.97)	0.171	13.94 (12.89, 14.99)	0.3275	12.64 (11.86, 13.42)	0.443
		Middle	13.98 (13.48, 14.47)		14.83 (13.92, 15.73)		13.19 (12.70, 13.68)
