Additional file 1: Fig. S1

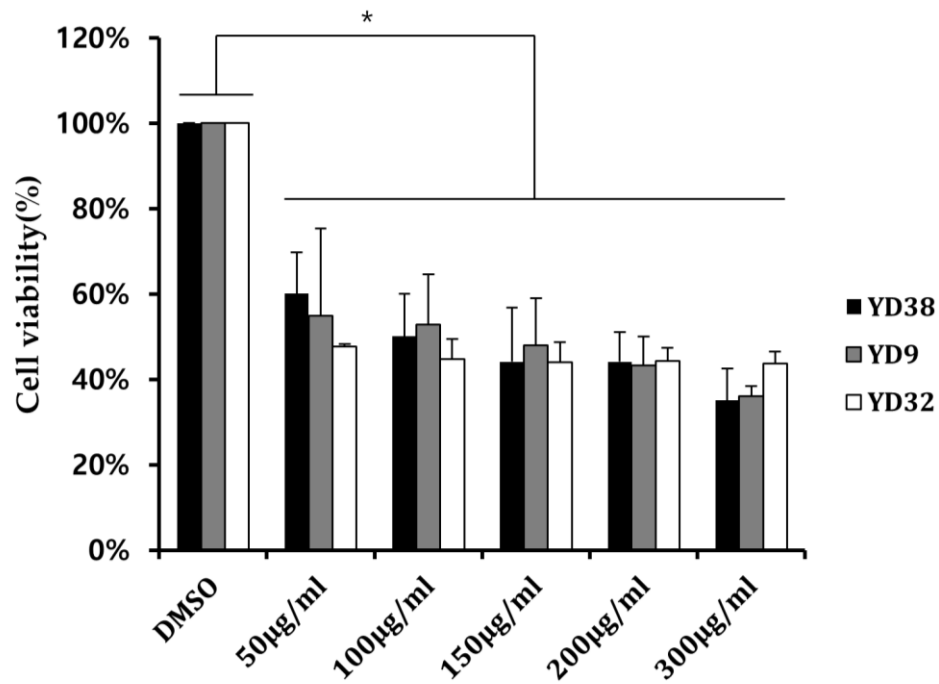

Fig. S1. OSCC cell viability by treatment with *O. octandra*. Three OSCC cells (YD38, YD9 and YD32) seeded in 96-well culture plats (2×10^3 /well) and were treated with the indicated concentrations (50 µg to 300 µg/ml) of *O. octandra* for 72 h, and the MTT assays were performed (* $P < 0.05$ by Mann-Whitney U tests).
