Patient Education Scenario – OSCE Station 2

Opening Scenario

Mrs C. Barakat is a 50-year-old woman who was admitted to the cardiology ward for Atrial Fibrillation. This morning, you are reviewing her prescription prior to discharge.

You are the student pharmacist caring for Mrs. Barakat. Please take the time to review the patient information and the discharge medication prescribed. Afterwards, enter the patient room to counsel Mrs. Barakat on her anticoagulant medication and address any concerns questions the patient may have.

You have 15 minutes to:

- 1- (3 minutes) to review and Assess the medication and her anticoagulant information
- 2- (10 minutes) to complete the discussion with the patient
 - a. Open the discussion: Introduction (verify, identify self, reassure patient)
 - b. Ask the patient key questions related to her current medication use
 - c. Educate the patient about her anticoagulant (i.e. assess, provide info, explain)
 - d. Close the discussion
- 3- (2 minutes) to receive feedback from the evaluator
