

Additional file 5: Figure S3. Comparison of *lasB* expression under different culture conditions. The expression values of *lasB* gene in each culture were normalized to that of LB on day 1. Data shown are the mean values $\pm$ SD of three independent experiments. Statistical significance by two-tailed unpaired *t*-test in comparison to 0.5% casein of each column is indicated as: *** $P < 0.001$. CAA, casamino acids.
