

Supplementary 4. INTS9 immunofluorescence staining

Figure legend. The use of immunofluorescence staining for INTS9 (depicted in red), Vimentin (displayed in green), and DAPI (colored blue) is shown. Vimentin was employed to emphasize the presence of the tumor cell (indicated by the arrowhead) and to analyze the expression levels of INTS9. Based on the findings, a reduction in INTS9 was observed following the introduction of siINTS9.
