

Supplementary Material: Different values verse rate ratio of Life expectancy (LE) between males and females

We have explored sex differences in LE for five years (1995, 2000, 2005, 2010, 2015) in both absolute and relative measures by overall LE and years. (Figures 1 and 2). Results from absolute and relative measures were quite similar as absolute versus relative measures of sex differences in LE were in close agreement (figure 3)

Figure 1. Life expectancy(LE) difference between males and females by overall LE(A) and years(B)

Figure 2. Rate ratio of Life expectancy(LE) difference between males and females by overall LE(A) and years(B)
