

Metadata

Title

Evaluation of the usefulness of determining the level of selected inflammatory biomarkers and resistin concentration in perivascular adipose tissue and plasma for predicting postoperative atrial fibrillation in patients who underwent myocardial revascularisation.

Author(s)

Maciej Rachwalik, Małgorzata Matusiewicz, Marek Jasiński, Magdalena Hurkacz

Promoter

dr Magdalena Hurkacz

Uniwersytet Medyczny im. Piastów Śląskich we Wrocławiu

List of possible text manipulation attempts

In this section, you can find information regarding text modifications that may aim at temper with the analysis results. Invisible to the person evaluating the content of the document on a printout or in a file, they influence the phrases compared during text analysis (by causing intended misspellings) to conceal borrowings as well as to falsify values in the Similarity Report. It should be assessed whether the modifications are intentional or not.

Active lists of similarities

Scroll the list and analyze especially the fragments that exceed the SC 2 (marked in bold). Use the link "Mark fragment" and see if they are short phrases scattered in the document (coincidental similarities), numerous short phrases near each other (mosaic plagiarism) or extensive fragments without indicating the source (direct plagiarism).
