October 2020-23 Training plan for year 1 to 3 for 9 new obstetric clinician trainees (4 at Redemption and 5 CB Dunbar hospitals).

There will be at least one day a week of protected classroom-based teaching time for our trainees at CB Dunbar and Redemption Hospitals. On the night before these selected teaching days the trainees involved should not have been on-call as this would make them too tired to learn properly.

This means that from 0900 to 1700 hours on the protected day, each of the trainees assigned to these two hospitals should be engaged in training for the whole day apart from a 1 hour's lunch break and a 30 minutes break during the morning and the afternoon of the protected day.

During the protected day, there will be, locally based training focusing each week on different subjects undertaken by Liberian consultant obstetricians based in each of the two training hospitals (Redemption and CB Dunbar Hospitals).

In addition, there will be separate tutorials undertaken using the "Go to Meeting" audio visual system from the UK by experts in advanced obstetrics (5 consultants redacted). These distance learning-based tutorials will **occur at the beginning of each training day** and be followed by a written examination covering the previous week's tutorial.

In the subsequent week there will be feedback by audiovisual conference on the results of the examinations undertaken the previous week.

Between tutorials (local and UK based) the trainees will study the subjects listed within the programme provided below using the MCAI obstetric handbook and videos and papers from the E Library on their Chromebook Computers.

During the UK originating tutorials and follow up to examinations at Redemption and CB Dunbar Hospitals, the MCAI programme managers (Redacted) will be with the trainees (using the MCAI MacBooks) to ensure that the technology works. They will also invigilate the examinations.

We suggest that the training days be as follows: Tuesday for Redemption Hospital (based in Redemption Hospital), and for CH Thursday for CB Dunbar Hospital. This means that the trainees at Redemption will not be on-call night duty on Monday nights and those at CB Dunbar will not be on-call duty on Wednesday nights.

Outline plan for training

The training day will begin with a 1 to 2 hour of assigned joint study by distance learning audiovisual input by internet from the trainer from the UK and the obstetric clinician trainees using the MCAI handbook. This will cover the topics to be discussed in the tutorials for that particular day. It is also recommended that trainees read about the subject in advance at home (homework).

MCAI Logisticians will provide the audiovisual system and invigilate the exams.

Following the audiovisual distance learning on the training day there will a 1 to 1.5 hour written invigilated examination based on the previous week's learning. During this examination, which will provide material for the MOH and LBNM, the trainees must not have access to their mobile phones which should be temporarily looked after by logistic staff. There must be no discussion between trainees during the examinations.

The results of each week's examination will be feedback to the trainees during the next week's session.

Each tutorial will be accompanied by power-point presentations and videos which are outlined below for each protected training day. These videos and power-point presentations are located in the E Library on the Chromebooks and should again be studied as homework before the training day begins so that the trainee is already well prepared for each tutorial.

There is a total of 2 x 2 week holidays plus individual Christmas/New year days

Plan for each training day at both Hospitals

Date of each training day	Audio visual training undertaken by:	Contents of training	Reference pages in handbook	Reference in E library videos and power-point presentations
Week 1 begins 26 th October 2020		Safe blood transfusion and Triage	C5 C4	
Week 2 begins 2 nd November 2020		Antenatal care and the hospital Nursing pregnant women and girls in hospital	A1 and A2	Focused AN care D43 ** Food for life D44* Warning signs pregnancy D97** Preparing birth room G70 ** The birthing process G88** Vaginal exam in labour J94** How to plan pregnancy D50* Teenage pregnancy A109*
Week 3 begins 9 th November 2020	Vani Tuesday Maire Thursday	Managing normal labour and delivery (part 1: partograph,)	A3	Giving good care in labour G46** How to use partograph G51** Initial assessment in labour G56** Respectful maternity care G115** Position of baby in labour G90**
Week 4 begins 16 th November 2020	David Tuesday Maire Thursday	Managing normal labour and delivery (part 2) First stage and induction (include ARM oxytocin)	A3 and A4	Foley catheter induction G122 * Augmenting with oxytocin G142**
Week 5 begins 23 rd November 2020	David Tuesday Maire Thursday	Managing normal labour and delivery (part 3) Second and third stage	A3, A4 and A5	Examining placenta G40** Managing 2 nd stage G61 *** Managing 3 rd stage G62 *** Immediate care after birth G55*** Manual removal placenta J63** Manual removal placenta J64*** Preventing tears during birth G135 *** Danger signs after birth G131*** Helping breast feed G49*

Week beginning 13 th February 2023		Interns to undergo presentations on Tuesday (Redemption) and Thursday (CB Dunbar) on specific subjects as if they were training junior staff on the wards. Each presentation to last 30 minutes including questions from international trainer and from colleague interns. This week Lewis, Sonie and Wisdom will present on the management of a case of vaginal breech delivery first identified at 38 weeks' gestation in an antenatal clinic. The mother is G3 P2 and there is as yet no signs of labour at Redemption. Describe how you would manage this patient until she has delivered her baby including external cephalic version which although carefully undertaken is unsuccessful. Describe exactly how you would manage the subsequent vaginal breech delivery. Unfortunately, because the fetus continues to present as a breech when she goes into labour there is subsequently the not uncommon complication that the fetal head gets stuck during vaginal breech delivery and the fetal heart rate is varying from 90 to 110 bpm following each contraction. INTERNATIONAL TUTOR IS DR BRIGID HAYDEN. Koffa and Garmai will present on the management of the same case described above as undertaken at CB Dunbar Hospital. INTERNATIONAL TUTOR IS DR MAIRE CASEMENT		
Week beginning 20 th February 2023		This week Esther and John will present on the management of the case of the breech malpresentation described above. INTERNATIONAL TUTOR IS DR BRIGID HAYDEN Rachel and Jestina will present on the management of the case of the breech malpresentation described above. INTERNATIONAL TUTOR IS DR MAIRE CASEMENT		
Week beginning 27 th February 2023		Interns to undergo presentations on Tuesday (Redemption) and Thursday (CB Dunbar) on specific subjects as if they were training junior staff on the wards. Each presentation to last 30 minutes including questions from international trainer and from colleague interns. This week Lewis, Sonie and Wisdom will present on the management of a case of twins presenting in labour at term In a primigravid mother. Describe how you would manage this patient until she has delivered her first baby and then how you would ensure safe delivery of the second twin who is in the transverse position. which although carefully undertaken is unsuccessful. INTERNATIONAL TUTOR IS DR BRIGID HAYDEN. Koffa and Garmai will present on the management of the same case described above as undertaken at CB Dunbar Hospital. INTERNATIONAL TUTOR IS DR MAIRE CASEMENT		
Week beginning 6 th March 2023		This week Esther and John will present on the management of the case of twins described above. INTERNATIONAL TUTOR IS DR BRIGID HAYDEN Rachel and Jestina will present on the management of the case of twins described above. INTERNATIONAL TUTOR IS DR MAIRE CASEMENT		
Week beginning 13 th March 2023		Interns to undergo presentations on Tuesday (Redemption) and Thursday (CB Dunbar) on specific subjects as if they were training junior staff on the wards. Each presentation to last 30 minutes including questions from international trainer and from colleague interns. This week Lewis, Sonie and Wisdom will present on the management of the following patient: A primigravida presents in active labour, having had no antenatal care, and saying that she is 9 months pregnant. The fundal height is 34cm. The cervix is fully dilated, with fresh meconium present. The vertex is at +1 to the spines. The fetal heart rate is 120 beats per minute, with deep decelerations after each contraction. INTERNATIONAL TUTOR IS DR BRIGID HAYDEN Koffa and Garmai will present on the management of the same case described above (FETAL DISTRESS) as undertaken at CB Dunbar Hospital. INTERNATIONAL TUTOR IS PROF DAVID SOUTHALL

Wednesday 5 th April 1330 Liberian time 1430 UK time	CB Dunbar Trainees Emergency obstetric hysterectomy: part 1 INTERNATIONAL TUTOR IS DR KIM HINSHAW			
Week beginning 10 th April 2023	Redemption Trainees Interns to undergo presentations on Tuesday (Redemption) and Thursday (CB Dunbar) on specific subjects as if they were training junior staff on the wards. Each presentation to last 30 minutes including questions from international trainer and from colleague interns. This week Lewis, Sonie and Wisdom will present on the management of the following patient: A patient presents from a 48 period of labour at home 6 hours drive from the hospital where she attends the emergency room. She is a primigrava, at 42 weeks gestation. She has a fever of 39 degrees C and is in early septic shock with a heart rate of 120 bpm, BP 80/50 mm Hg and CRT 4 seconds. The fetal heart rate is absent on doppler and on ultrasound scan. She says the baby stopped moving 10 days ago. How do you manage this patient who on examination has evidence of obstructed labour with cervical dilatation of 6cm and head 5/5. There is foul smelling meconium-stained liquor. INTERNATIONAL TUTOR IS DR BRIGID HAYDEN CB Dunbar Trainees Koffa and Garmai will present on the management of the same patient described above as undertaken at CB Dunbar Hospital. INTERNATIONAL TUTOR IS DR MAIRE CASEMENT			

Date of each training day	Audio visual training undertaken by:	Contents of training	Reference pages in handbook	Reference in E library videos and power-point presentations
