

Investigating factors that promote evidence-based policymaking among policymakers, researchers, and KBs

Interview guide

※Interviewees will be encouraged to discuss practical tips for constructive solutions based on their own experiences in policymaking. The interviewer will delve deeper into specific details to elicit solutions at a granular level.

1. Background information (experience in policymaking and involvement in EBPM)
2. Perceptions of EBPM (do you consider EBPM important? Do you think it is sufficiently implemented?)
3. Understanding of the EBPM cycle steps (what steps do you recognise in the EBPM process?)
4. Facilitating and inhibiting factors at each step of the EBPM cycle
 - What are the facilitating and inhibiting factors at each stage?
 - If there are inhibiting factors, what solutions can be proposed? (refer to the diagram)
