Additional file 4. RNF121 silencing sensitizes cells to TNF α -mediated apoptosis.

HeLa cells were transfected with a control non-specific (*NS*) siRNA or with siRNAs against RNF121 (*RNF121a* or *b*). 72 hrs later, cells were exposed to either TNF α (25 ng/ml) in the absence (**A**) or the presence of CHX (10 μ g/ml) (**B**), or CHX alone (**C**) for the indicated periods of time. The percentage of living cells was measured by trypan blue exclusion. The data shown are the means $\pm$ SD from three independent experiments, with 300 cells per condition. The knock down of RNF121 is shown in (**D**).
