

Patient Informed Consent

We are conducting a study on factors affecting routine childhood immunization among caregivers of children under five years in Southwestern Nigeria.

Purpose of the Study

The purpose of this study is to assess the factors that affect Immunization uptake of children under five years old. You have been invited to take part because you are a caregiver to your child.

Procedure of the research

The study involves administering questionnaires to study participants, including caregivers such as mothers, fathers, or aunties.

Potential Risks

There is no risk to participants. Some of the questions we ask may reveal personal decisions, but you may choose not to answer and end your participation at any time. Please note that we will not include your name or any other information that could identify you in the reports about this study.

Potential Benefits

In this study, you will have the opportunity to share your knowledge and experiences. Your participation in this study will help us gather reliable data that will form the basis for interventions to improve immunization processes and access.

Confidentiality

The information collected during the study will be kept confidential. The study team will make every effort to protect your privacy and keep all the information you provide secure. No specific identifiers will be included in any reports from this study. The data will be stored on a computer dedicated to this study.

Consent to take part in the study: Do you agree to participate in the study? Yes/N

Researcher: I confirm that I have explained the nature and extent of the research, study procedures, potential risks and benefits, and confidentiality of personal information.

Name of person giving consent: _____

Signature of person requesting for consent: _____ Date: _____
