

Additional File 5.

Supplemental Figure S4. Optical density for AQP1 protein in Individual Sections. For each coronal level examined across the rostro-caudal axis of the mouse ventricular system multiple sections were assessed for AQP1 protein levels by fluorescent immunocytochemistry giving the data points shown. The mean per mouse at each level (grey horizontal lines) was

carried forward to Fig. 6 for analysis across groups. Error bars show standard deviation for individual sections from each sample/mouse. Individual measurements show variability but an overall effect of AAV-MIX-AQP1 treatment.
