

Additional Material 1

Scenarios for timing of questions on breastfeeding duration within the basic SUSE-II-study design

Legend

Scenario 1: When a mother stated only breastmilk as the actual nutrition and no other fluids or foods in the regular questionnaire at 2 months, she did not receive an EBF-Q or ABF-Q. If however, breastmilk + formula were reported at 4 months, she did receive the EBF-Q immediately. If she continued partial breastfeeding beyond 6 months, she never received the ABF-Q.

Scenario 2: When a mother reported breastmilk and water (or other fluids) in the regular 2-month questionnaire, she did receive the EBF-Q. If at 6 months, she no longer reported breastmilk but formula (and eventually complementary food/Beikost), she received the ABF-Q.

pp: post partum; EBF-Q: exclusive breastfeeding questionnaire (reference duration); ABF-Q: any breastfeeding questionnaire (reference duration); Beikost: complementary feeding
