

Supplementary Figure 1. Expression of the *AP4M1* gene in several regions of the human brain throughout development and aging. Note the higher expression levels during fetal development (birth is marked with a vertical solid line). Data from the Human Brain Transcriptome (HBT) project (<http://hbatlas.org>).

CBC - cerebellar cortex, **MD** - mediodorsal nucleus of the thalamus, **STR** - striatum, **AMY** - amygdala, **HIP** - hippocampus, and **NCX** - neocortex
