

Bio data

Country

Main disease group focus

- ☐ Ataxia / HSP
- ☐ Atypical parkinson's disease
- ☐ Huntington's disease and choreas
- ☐ Dystonia / NBIA / Paroxysmal disorders
- ☐ Frontotemporal dementia
- ☐ Leukodystrophies

Profession and career position (healthcare professionals)*

Clinicians*

- ☐ At least consultant level
- ☐ Not reached consultant level

Laboratory based scientists*

- ☐ At least laboratory manager level
- ☐ Not reached laboratory manager level

Other*

- ☐ Yes
- ☐ No

Patient / patient representative*

- ☐ Yes
- ☐ No

Prioritisation of research themes for rare neurological diseases

Please RANK the following research themes regarding their relevance for the activities of the ERN-RND during the next 5 years by ordering the 5 topics/items listed below in order of priority (1-most relevant, 5-less relevant)

(Please do NOT assign an identical rank score to items of similar importance, but rank-order all items)

- The origins of disease
- Disease definition and diagnosis
- Developing therapies, preventive strategies
- Disease mechanisms and models
- Healthcare and social care

* only in the survey of January 2018
