Dear Editor Prof. Dr. David Holtzman,

Please find enclosed a revised version of the research paper entitled: "**Domino-like Effect of C112R Mutation on ApoE4 Aggregation and Its Reduction by Alzheimer's Disease Drug Candidate**", which we are submitting for re-consideration by the *Molecular Neurodegeneration.*

We want to express our thanks to you and the referee for constructive and highly relevant comments. We did our best to incorporate his/her suggestions in our revised manuscript. We have also conducted a point-by-point response to all comments/concerns raised by the referee and revised all the manuscript parts, which were not sufficiently clear in the previous version. We hope that these changes will make our manuscript acceptable for publication in *Molecular Neurodegeneration*.

Sincerely yours,

Martin Marek, David Bednar and Jiri Damborsky
on behalf of the co-authors
