Supplemental Figure 1 Behavioral and physiological assessments during chronic TGN-073 treatment

Behavioral assessments were performed at 9 months of age following chronic TGN-073 treatment.

(A) Body weight changes in PS19 mice over the 3-month treatment period. N=17-21 mice. (B) Total arm entries and spontaneous alternation performance in the Y-maze spontaneous alternation test. Unpaired two-tailed Welch's t-test. N=20-26 mice. (C) Limb clasping scores. Mann-Whitney U test. N=23-29 mice. (D) Nestlet building performance. Mann-Whitney U test. N=12-16 mice.
