

Supplementary Figure 10

Supplementary Figure 10 related to Figure 5

Inhibition of ERAP1 in combination with entinostat treatment delays the growth of 9464D tumors and reshapes the intratumoral immune infiltrate

A-C Representative multiple immunofluorescence staining of the tumors analysed in Figure 5 for CD8⁺ T cells (green) expressing (A) granzyme B (red) or (B) IFN γ (red) and NK1.1 cells (C) expressing IFN γ are shown at magnification 40 $\times$, scale bar 50 μ m. Images with nuclei (Hoechst) are shown on the left of each panel. The yellow rectangles are highly magnified on the right-hand panels. V, vehicle control; Ent, entinostat.
